Leave Management System – PHP Project

Team Members:
Abhishek Acharya (CE-001)
Aditya Krishnakumar (CE-002)
Raj Baraiya (CE-003)
Nilesh Bhadane (CE-004)

About The Project:

In this project, the members are creating a leave management system. The project has the following components:

➔ CLIENT CONSOLE
➔ ADMIN MANAGEMENT CONSOLE
➔ CLIENT REGISTRATION COMPONENT

Before accessing the CLIENT CONSOLE, the client has to register himself/herself using the CLIENT REGISTRATION COMPONENT. The registration component consists of a simple HTML form and the confirmation page for the same. Also, the registration details of the same are mailed to the client's registered email address. The mail feature is present in all the three components and is used as required.

The CLIENT CONSOLE consists of the following features:

➔ Requesting for a leave
➔ Password recovery option (through email)
➔ Seeing the number of leaves available to him/her and all the details about him/her
➔ Viewing the complete profile of him/her with his/her profile picture along with the all the types of leaves (Casual, Sick and Earn) sanctioned to him/her by the admin

The ADMIN MANAGEMENT CONSOLE consists of the following features:

➔ Removal of an employee (if he/she has quit the company)

➔ Power of granting/rejecting the leaves requested by the client with/without specifying the reason. Also, searching and deleting the employee as per his/her department (if the application is used in a college/university) associated with

➔ Mailing the leave grant/reject status along with the reason to the client's registered email address.
➔ Seeing the type of leaves sanctioned by him/her to the client
